WHAT IS OSTEOPOROSIS?
Osteoporosis is a bone disease that occurs when the body loses too much bone, makes too little bone or both. As a result, bones become weak and may break from a fall or, in serious cases, from sneezing or minor bumps.

Osteoporosis is common: Approximately 54 million Americans have osteoporosis and low bone mass. An estimated one in two women and up to one in four men age 50+ will break a bone during their lifetime due to this debilitating disease.

TAKE ACTION
SIMPLE STEPS TO PROTECT YOUR BONES

- Get enough calcium and vitamin D.
- Eat a well-balanced diet with foods that are good for bone health, like fruits and vegetables.
- Exercise regularly; weight-bearing exercises are critical for bone health.
- Don’t smoke and limit alcohol intake.
